

Project Management

Whether you are tracking multi-million dollar renovations or managing a one-time project, the Data Plus Project Management module includes functionality that can save time and help you stay within budget.

Projects can be broken down into as many sections as needed, with both original and working budgets maintained. Project reporting includes budget, committed, and actual expense data. Standard configurations of products, such as the components of a standard double room, can be stored as a template to be used to quickly build new projects.

Project Management is fully integrated with our Purchasing and Accounts Payable modules, so projects can be budgeted and tracked as commitments are made through purchase orders, and expenses are incurred as items are invoiced.

Features

Set Project Status - Projects can have a status of Active or Inactive.

Multi-Property Feature - Projects may be associated with one or more properties.
